

PRODUCT AND ENGINEERING STUDIO

Mumbai · Dubai

dotslash lab

AI, blockchain and full-stack products for startups, enterprises
and governments.

WHO WE ARE

DotSlashLab is a product and engineering studio based in Mumbai and Dubai.

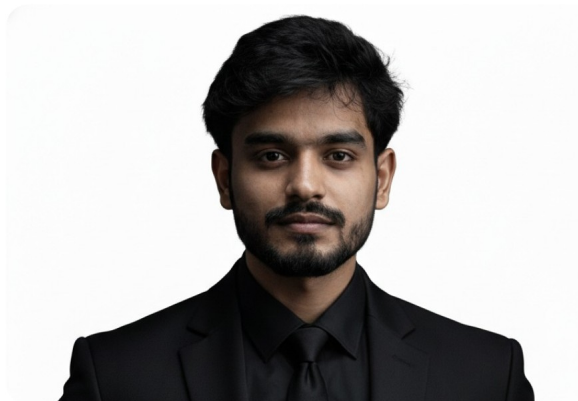

For three years we have been building software for startups, enterprises and government bodies. We have shipped over 40 products, and most builds go from scoping to a working product in about 21 days.

Our work covers AI infrastructure, AI agents, trading agents, full-stack web and mobile apps, and blockchain.

We sit between design and execution. Between interfaces and systems. Between ideas and things people actually use.

THE OPERATORS

A founder-led studio. You work directly with the people running it.

Aadiitya Singh

FOUNDER · VISION & COMMAND

Architect of high-velocity systems. Leads product and engineering, and is the mind behind 99byte.dev.

Manoj Singh

CO-FOUNDER ·
SYSTEM BACKBONE

Drives product strategy, operations and scaling, and coordinates execution across the studio.

BY THE NUMBERS

3

years building for
startups, enterprises and
governments

40+

products shipped

21

days, typical scoping to
working product

5

blockchains we build on

7

countries we have
delivered in

\$28M

raised by Yap.market
and Xade Finance after
our builds

WHAT WE BUILD

One team from interface to infrastructure, so nothing gets lost between design and execution.

AI systems & agents

LLM orchestration, custom agentic workflows and the infra underneath.

Trading agents

Automated trading agents and prop trading platforms for live markets.

Web & mobile apps

Full-stack products that are production-ready, scalable and secure.

Blockchain & audits

Protocols and smart contracts, written and audited, across five chains.

ON-CHAIN EXPERIENCE

We write smart contracts, audit them, and have built settlement infrastructure for a national government.

02 **Ethereum**

03 **Cardano**

04 **Stellar**

05 **BNB Chain**

HOW WE WORK

21 days

is how long most builds take from scoping to a working product.

01

Scope

The users, the problem and the smallest product that proves it.

02

Design

Interfaces and architecture, decided early so the build moves fast.

03

Build

Short cycles, with working software you can test along the way.

04

Ship and scale

Launch, measure and keep improving with the same team.

Selected work

What we built, and what happened next.

CASE STUDY 01

Yap.market

Web3 · Prediction markets

We built Yap.market's platform and its prediction marketplace.

SCOPE	Full platform and prediction marketplace
GROWTH	Referral system and retention loops, built in from day one
USERS	Scaled to 10K+ users

\$5M

Yap.market went on to raise \$5M

CASE STUDY 02

Xade Finance

Fintech · Prop trading

We built Xade Finance's prop trading app.

SCOPE	Prop trading application
DOMAIN	Trading and capital markets
OUTCOME	Xade went on to raise \$23M

\$23M

Xade Finance went on to raise \$23M

CASE STUDY 03

PathPulse

Payments · Public sector

Payment and settlement infrastructure for the South African government.

SCOPE	Payment and settlement infrastructure
STACK	Stellar and Cardano
END USER	Government of South Africa

Stellar + Cardano

Dual-chain rails for government payments

CASE STUDY 04

Chatlio

Gaming · Automation

We built Chatlio's casino app and web platform, and are now automating its operations.

BUILT	Casino app and web platform
NOW	Automating their full casino operations
MODEL	Long-term product and operations partner

Build, then automate

From shipping the product to running its operations

MORE WORK

Across AI, fintech, Web3, public sector and HR tech.

Adcotel

Mobile app, web app and the complete infrastructure behind them.

In progress

Maharashtra Govt.

Projects with government departments in India.

Ongoing

Easyhry

A hiring platform built for the US market.

Shipped

PP Editor

AI video editing with AI workflows, auto-captions and fast export.

10x faster workflow

Astra Finance

StarkNet integration, audit-ready code and institutional-grade UX.

\$50M+ TVL secured

Echo AI

A specialized LLM, workflow automation and orchestration pipeline.

30% efficiency gain

WHERE WE WORK

Based in Mumbai and Dubai.
Delivering across four continents,
for private companies and
governments.

Malaysia

Government projects delivered

Good products are rarely accidents.

They come from observation, iteration, structure and repeated decisions. That is how we build.

Structure

Strong systems make better products and faster decisions.

Direction

We ship, learn and improve instead of polishing ideas in isolation.

Signal

Every interaction, layout and decision sends a signal.

Working on something in AI, blockchain or product?

We would be glad to have a conversation.
